PROCEDURE STATEMENT

Texas A&M Veterinary Medical Diagnostic Laboratory (TVMDL) will follow (on–campus locations in accordance with section 1.0) and develop (off–campus locations) emergency management plans and emergency alert systems (EAS) in efforts to first protect personnel, and second to protect and preserve agency property. This procedure provides TVMDL locations with guidelines for establishing, adopting, and following emergency management plans and alert systems.

REASON FOR PROCEDURE

This procedure is developed to ensure compliance with all applicable Texas State and The Texas A&M University System (TAMUS) laws, policies and regulations, as well as to establish formal procedures and guidelines related to emergency management.

PROCEDURES AND RESPONSIBILITIES

1.0 GENERAL

1.1 In accordance with Texas Education Code § 51.218, TVMDL will establish an EAS for agency personnel. On–campus locations will use the Texas A&M University (TAMU) Code Maroon EAS; off–campus locations will develop internal communication channels through the use of email notifications.

1.2 In accordance with System Policy 34.07, Emergency Management, TVMDL will implement emergency management plans to ensure proper protection of both personnel and property. Emergency management plans provide a set of predetermined actions for responding to situations such as fire, tornado, hurricane, bomb threat, work–place violence, chemical spills, and other emergencies or disasters which require the orderly management of resources and processes to protect life and property. It is therefore imperative that emergency management plans be established and maintained for all locations.

1.3 Regardless of location, all TVMDL personnel are required annually to complete TAMUS course number 2111669, Required Emergency Alert System Notification.

2.0 ON–CAMPUS EMERGENCY MANAGEMENT

2.1 EAS Notifications

TVMDL on–campus locations will use the TAMU Code Maroon EAS. Code Maroon employs multiple notification methods. Employees may manage their notification preferences by visiting the Code Maroon Web site: http://codemaroon.tamu.edu/, or while completing the annually required online training course.

2.2 Written Emergency Management Plans

2.2.1 The on–campus location will follow the Texas A&M University Crisis Management Plan.

2.2.2 Training for the on–campus locations will be the same as off–campus locations in accordance with paragraph 3.2.2.F. Evacuation drills should be completed in conjunction with the drill for the
occupants of the building (if any) under the supervision of the Texas A&M University Department of Environmental Health and Safety.

3.0 OFF–CAMPUS EMERGENCY MANAGEMENT

3.1 EAS Notifications

3.1.1 Off–campus locations will develop internal communication channels through the use of the TVMDL Exchange email system to disseminate emergency alert notifications.

3.1.2 The individual responsible for the overall location emergency management plan will assign a designee the responsibility for maintaining corresponding email notification lists to be utilized in emergency management alert scenarios.

3.2 Written Emergency Management Plans

In conjunction with the Deputy Director and Resident Directors, the TVMDL safety officer will develop written emergency management plans for all locations, in accordance with the guidelines contained herein.

Written plans will be dated, and will address at the least the following items:

3.2.1 Prevention Plans to address the following areas:

A. Identify potential hazards through inspections and/or evaluations of facilities, grounds, collateral properties, and general activities at the location; then, develop a plan to aid in reducing potential disasters from these elements.

Examples: chemical storage/handling, flammable storage, etc.

B. Identify potential incidents at each location which would dictate the need to evacuate the building or seek shelter.

Examples: fire, bomb threat, chemical spill, gas leak, work–place violence, tornado, hurricane, etc.

C. Examine the suitability of building shelters, or areas to which individuals will be evacuated so as to minimize danger to individuals.

3.2.2 Preparedness Plan to address the following areas:

A. Individual responsible for the overall location emergency management plan and the individual(s) responsible for:

i. Implementing the emergency plan.

ii. Contacting the emergency responders if necessary.

Example: The receptionist will activate the fire alarm as necessary to evacuate the building, then will call 9-1-1 (or 9-9-1-1, or other phone number as appropriate) from a safe location.

iii. Assisting visitors and occupants with special needs.

Example: The immediate supervisor or host of any visitor or person with special needs is responsible to ensure the safe evacuation or sheltering of this person.

iv. Determining when it is safe to re–enter the building or leave the shelter location.

Example: No one will re–enter the building until the fire department (or Deputy Director or Resident Director) indicates that it is safe. Or, the Resident Director or
Deputy Director will contact the police department (or fire department, weather bureau, radio station, etc), and verify that the danger has passed the area. He/she will then notify the sheltered personnel it is safe to vacate the shelter. In the event that proper authorities cannot be contacted, the Resident Director or Deputy Director will make the determination as to the relative safety of the situation, and will instruct the sheltered personnel to remain/vacate the shelter.

B. Notification methods must include the EAS, in addition to any other methods. The process to distinguish between evacuation and seek shelter notifications shall be included and differentiated.

C. A listing of the agencies or emergency response units that are available, their telephone numbers, and alternate means of contact if available.

Example: Amarillo Fire Department, dial 911, or send a runner to (location).

D. Locations for building occupants to gather upon evacuation or locations of emergency shelter.

Example: Employees will gather near the veterinary school receiving dock if the wind is out of the west for a head count to determine if anyone is missing. If anyone is missing, the safety officer will immediately notify the emergency responders. (Note: This should be at least 200 feet from the building and up–wind, where practical, or the center restroom, hallway, storage room, etc.)

E. Prepare and include evacuation plan diagram(s) indicating the various directions to the exits of buildings and locations to gather for evacuations, plus locations and directions to the shelter areas in each building (if the building has an area which can be used as a safe shelter). Copies of these diagrams will be included in the plan, and will be posted on appropriate bulletin boards or other locations accessible to all occupants.

F. Training of individuals so that they are ready to react effectively once an emergency has occurred, and the emergency management plan has been activated.

i. Initial training to include: providing the employee a copy of the plan (should be conducted during the course of a new employee’s orientation with the location).

ii. When the plan has been changed, employee training will consist, at a minimum, of ensuring all employees are notified of the changes to the plan and distribution of a copy of the plan to all employees.

iii. Continuation training through annual evacuation drills to verify the viability of the plan, and to formalize the employees with the plan. This should be done in cooperation with the local fire department. An evacuation drill checklist should be developed, and kept on file to assist with this effort.

G. Distribute copies to the potential emergency responders, such as the local fire department, police department, etc.

3.2.3 Response Plan to include:

A. Indicate at what stage of the emergency, disaster, or crisis, the emergency management plan will be implemented.

Example: When the tornado sirens are activated, or a radio announcement of a tornado, or an employee has visual contact with a tornado, the Resident Director will implement the crisis management sheltering plan.

B. Directions to contact the appropriate local agencies or emergency responders for assistance.
Example: The receptionist will activate the fire alarm as necessary to evacuate the building, then will call 9-1-1 (or 9-9-1-1, or other phone number as appropriate) from a safe location.

C. Ensure that visitors, contractors, and other individuals who are at the location are included in any notifications.

D. State the methods for determining when the emergency has ended and it is safe to re-occupy the building or leave the shelter area.

Example: No one will re-enter the building until the fire department (or Resident Director or Deputy Director) indicates that it is safe. Or, the Resident Director or Deputy Director will contact the police department (or fire department, weather bureau, radio station, etc.), and verify that the danger has passed the area. He/she will then notify the sheltered personnel it is safe to vacate the shelter. In the event that proper authorities cannot be contacted, the resident Director/safety coordinator will make the determination as to the relative safety of the situation, and will instruct the sheltered personnel to remain/vacate the shelter.

3.2.4 Recovery Plan to include:

A. Following any major emergency/disaster, the AgriLife Human Resources Office will attempt to assist or coordinate assistance for locations in any way possible as they seek to aid personnel with care, counseling, or other employee assistance needs within the capabilities of the office.

B. Following an emergency/disaster that required implementation of the emergency management plan, review all procedures and modify the plan as necessary to address problems of deficiencies that have been identified.

3.3 Plan Approval

Emergency management plans, and revisions thereto, will be submitted to the agency Director for review. Following this review, the plans will be submitted to the Chancellor for approval.

3.4 Plan Review

Emergency management plans for all locations will be reviewed at least annually, or upon completion of additions/modifications to facilities.

4.0 PUBLIC INFORMATION RELEASES

Release of information to the public may be requested by media or other person following incidents of the type which require the implementation of the location emergency management plan. Employees shall refer all such requests to the Director or designee.

4.1 After plan activation or as soon as practical, the Director will notify the AgriLife Risk and Compliance Office, and the AgriLife Communications Office. The AgriLife Communications Office will coordinate information with the Texas A&M System Office of Marketing and Communications.

4.2 For other than natural disasters, information is not to be released until an investigation has been completed.

4.3 Under no circumstances will information concerning names of persons deceased, injured, or held hostage be released without first ascertaining that full notification of next of kin (or person designated to be notified in the event of an emergency) has been made. Information that all personnel at the location are safe and accounted for may be released as soon as that has been determined.
RELATED STATUTES, POLICIES, OR REQUIREMENTS

Texas Education Code § 51.218, Provisions Generally Applicable to Higher Education

System Policy 34.07, Emergency Management

System Regulation 34.07.01, Emergency Management Plan for System University Campuses

DEFINITIONS

For the purpose of this procedure, the following terms apply:

On–campus: All TVMDL locations located in the Bryan/College Station area.

Off–campus: All TVMDL locations located outside of the Bryan/College Station area.

CONTACT OFFICE

For additional questions, contact the Director’s Office at 979-845-2679, or the AgriLife Risk and Compliance Office at 979-845-7879.
